

# UNLEASH YOUR IMAGINATION WITH QUALITY PRINTS.

## PROPEL YOUR BUSINESS WITH SEAMLESS TEXTILE PRINTING.

Epson digital textile printers give you control and let you manufacture at scale with incredibly high precision, increased reliability and custom designs, limited only by your imagination. With a comprehensive range of textile printers to accomplish all of your textile printing needs, printing custom textile designs across a wide variety of applications becomes effortless.

ENGINEERED FOR **good**

Product images are for illustration purposes.

Disclaimer: The OEKO-TEX® ECO PASSPORT and Bluesign certification are applicable for selected inks only.

# Why Digital Printing

As the world changes and evolves, so must we. Over the years, digitalisation has shaped our lives and this is made prominent especially in the textile printing industry. As the demand for customised prints increases, the shift towards a short-run print job becomes more apparent. This makes it challenging for analogue printers to meet the changing and growing needs of consumers.

# Disadvantages of Analogue Printing

- Potential for human error particularly in the screen preparation stage is greater.
- Design needs to be simple as analogue printing cannot achieve gradation.
- Manpower-intensive with close monitoring of steps for quality prints.
- Poor cost-effectiveness of small orders, resulting in the limitation of the number of print jobs taken.
- Quality and consistency are not guaranteed.
- Shorter cycles of fashion trends and the increase of small businesses globally, result in the phasing out of analogue printing.
- Many small to medium print jobs that were once given to offset presses has made digital printing the de-facto choice.

# Advantages of Direct-to-Garment (DTG) and Dye Sublimation Printing

## Digital Printing Workflow

Digital printing processes are made convenient and seamless in comparison to traditional silk screen printing. Be it direct-to-garment or dye sublimation printing, experience greater efficiency with minimal effort in all your textile printing projects.

## Direct-to-garment printing

Where traditional printing requires extra procedures including the need for creation of screens per colour, digital direct-to-garment printing eliminates this for increased productivity.

### Printing on White Fabric

### Printing on Black Fabric

## Traditional Silk Screen Printing Process

Extensive colour options

Maximum detail in design

Suitable for small to large batch printing

Minimal upfront investment

Easily customised designs

The shift from analogue to digital has become highly apparent. In order to progress and advance, embracing digitalisation is key. There are many benefits of using digital printers for your textiles compared to analogue printing. From enabling small-batch printing, maximising detail in design, and even to driving sustainability, Epson's digital textile printers empower efficiency, effectiveness and eco-friendliness for your business in today's fast-paced society.

## Dye sublimation printing

With dye sublimation printing, the additional hassles of traditional screen and ink preparation are eliminated. Dye sublimation printing can be completed in just four simple steps.

### Dye Sublimation Transfer Workflow

### Traditional Silk Screen Printing Process

Prints seam-to-seam

Extensive colour options

Maximum detail in design

Suitable for small to large batch printing

EPSON

# Printing Technology

Take textile printing to new heights as Epson delivers state-of-the-art printing technology with PrecisionCore printhead and amazing quality inks.

# Printhead

Epson's range of textile printers is powered by our revolutionary PrecisionCore printhead technology that enables fast and reliable printing.

## Permanent Head

Epson's permanent Micro Piezo printhead utilises electronic cool crystal technology to propel each perfectly formed ink droplet onto the page with absolute precision.

## High Compatibility with Various Ink Types

Micro Piezo technology involves no heat and can use different types of genuine ink as it remains unaffected by thermal stress.

## Variable Ink Droplet Sizes

Meniscus control technology allows Micro Piezo printheads to eject up to five precise and consistent ink droplet sizes. On the other hand, thermal printheads are limited to one or two droplet sizes.

Ultimately, efficient, precise and repeatable performance for excellent image quality is made possible. Low vibration meniscus enables highly accurate dot shape and placement. The printhead also integrates ink repelling coating technology for reduced nozzle clogging. This is optimised specifically for the latest inks, improving printhead life.

# Direct-to-Garment Printhead

Designed for the purpose of direct-to-garment printing, the printhead ensures optimal print quality and fast print speeds.

## High-precision MEMS Manufacturing Process

By merging MEMS processes with its advanced piezo material science, Epson has been able to create microscopic, high-performance actuators and form high-accuracy ink channels. The outcome is an unparalleled level of manufacturing efficiency for consistent production quality.

## Unrivalled Print Quality

From watercolour effects and photographic images, to fine lines and details, the possibilities are endless. Our direct-to-garment printers contain print resolutions of up to 1400 dpi x 720 dpi for colour and up to 1400 dpi x 1400 dpi for white inks. Now, you have the creative reign to print anything imaginable and on-demand.

## Fast Print Speeds

Epson's direct-to-garment printers have up to 720 nozzles per inch dedicated to colour inks and 1400 nozzles per inch dedicated to white inks. With more nozzles on our printhead, you get to enjoy both incredible print speeds and phenomenal output.

---

# Dye Sublimation Printhead

Experience swift and reliable short-run, dye sublimation printing with our state-of-the-art printhead technology.

## Extreme Print Quality

Whether it is printing across apparels or personalised goods, our dye sublimation printers contain print resolutions of up to 1,440 dpi x 720 dpi 8-pass for amazing image quality.

## High-speed Printing

With true 720 nozzles per inch dedicated to each colour ink, outstanding print quality at fast print speeds is made possible.

## Sturdy and Reliable

By pairing our PrecisionCore print chip with co-developed Epson UltraChrome DS ink technology, class-grade reliability is achieved. Low machine maintenance and minimal downtime allows you to maximise savings with a printer designed specifically for the purpose of dye sublimation printing.

# Ink Technology

Epson inks have been developed to work flawlessly with Epson printers to deliver crisp, smudge-proof text and vibrant photographic images that will last for generations.

## Epson UltraChrome DG Ink

Epson UltraChrome DG inks produce clean, bright images with superior washability on dark and light garments.

### High-performance Garment Ink

UltraChrome DG ink uses new pigment ink technology designed for cellulose-based garment imaging that ensures compatibility with 100% cotton or cotton blend. It is developed together with printhead technology to improve overall reliability.

### Outstanding Colour Performance

Print images and patterns with clean, vibrant and accurate colours that will captivate any audience.

### Next Generation White Ink Technology

Developed using new, high-dispersion white ink technology, UltraChrome DG inks reduce sedimentation and clogging to deliver high-density, natural white colour on fabric.

### Robust Garment Durability

Garment durability is tested independently based on the industry standard AATCC testing method.

# Epson UltraChrome DS Ink

Epson's UltraChrome DS ink has been optimised with the Micro Piezo printhead for dye sublimation printing.

## Reliable Performance

Developed specifically for Epson's PrecisionCore TFP printhead, the overall printhead life is significantly increased, paving the way for reliable performance.

## Superior Image Quality

Produce class-leading image quality where image definition and text sharpness are enhanced.

## Newly Formulated High density Black Ink

Ensures rich, dark colours and solid blacks to achieve dramatic colour intensity and high colour contrast, all while consuming less ink.

## OEKO-TEX ECO Passport Certified

The OEKO-TEX® ECO PASSPORT is an independent certification system for chemicals, colourants and auxiliaries used in the textile industry.

The inks used in Epson textile printers have been tested for harmful substances in critical concentrations as listed in the ECO PASSPORT standard, and is found to have met the statutory requirements and that it is not harmful to human health.

## Bluesign Approved

In the fashion industry, sustainability and elimination of toxic substances are important trends. With Bluesign certification, ink and chemical manufacturers are able to minimise risks for their clients, environment, and company while optimising profitability and saving costs.

Epson inks are certified to be environmentally-friendly by bluesign. Customers can find the Epson inks that are certified under Bluesign on <https://finder.bluesign.com/index.html>.

Disclaimer: The OEKO-TEX® ECO PASSPORT and Bluesign certification are applicable for selected inks only.

# Epson Total Solution

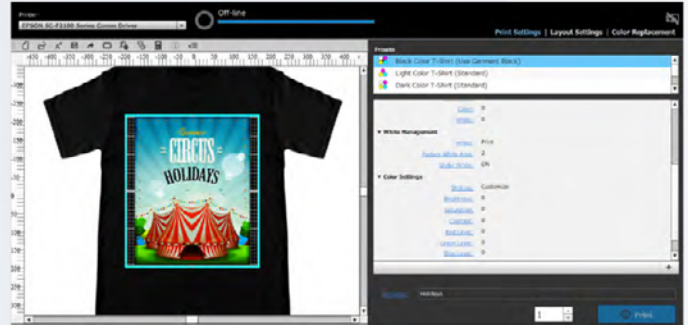

At Epson, we understand the importance of delivering a complete value chain for our customers. This is why we have Epson Total Solution, an all-inclusive, turnkey, integrated system that helps operators seize digital textile market opportunities.

By fully manufacturing all hardware and software components in-house, we enable the best printing results with seamless delivery of a total, end-to-end colour printing solution that will take your business to the forefront.

## Intuitive Garment Creator Software

With Epson's intuitive Garment Creator software, it is easy for users to use and navigate through the interface to design, edit and customise designs for production. The software allows users to save their predefined colour management and layout controls to deliver great results consistently

## Epson Edge Print Pro (RIP) Software

Epson's textile printers are compatible with RIP software and eliminate the hassle of data spooling from PC. Intuitive and convenient, printing can be done immediately after hardware and RIP installation. It is easy for beginners, reducing misprinting and time to save the total cost of ownership.

RIP software also supports Epson image processing technologies including Multi Layer Halftone,<sup>1</sup> LUT and Micro Weave. Harmonising these technologies to achieve unprecedented image quality with reduced graininess and smooth graduation, it also allows:

- High performance with Adobe PS core engine to process Post Script data [ CPSI ]<sup>1</sup> EMX<sup>2</sup> file with the connection of Epson Control Dashboard
- The management of four printers at once
- Multiple formats including PS/EPS/PDF/TIFF/JPEG/PNG/CALS-G4
- Online activation with software licence (not dongle operation)
- Continuation and improvement with added functions and supported models

<sup>1</sup> Configurable PostScript Interpreter

<sup>2</sup> Epson Media Extension

\* Applicable for the SC-F10030 only.

## Epson Cloud Solution PORT

Epson Cloud Solution  
**PORT**

Epson Cloud Solution PORT is a cloud-based solution for Epson large format printers' end users. The software provides users with the status of connected printers and alerts for troubleshooting if required.

Additionally, Production Monitor function allows users to visualise printer operational status easily from their PC or smart devices, improving productivity and efficiency. This solution also promotes remote monitoring, enabling accurate failure diagnosis and prompt responses to inquiries.

# DTG PRINTERS SERIES

Catering for businesses with high-volume T-Shirt print jobs, amaze your customers with astonishing colours and productivity with precise quality print, allowing a greater quantity output in a shorter amount of time.
