#### ULTRA-SHORT THROW INTERACTIVE PROJECTORS EB-696Ui/695Wi/685Wi/685W

Interactive, versatile and powerful, these projectors are set to redefine your discussions and presentations. Featuring advanced features such as beyond Full HD ultra-short throw projection, PC-less interactivity and seamless interactivity across dual screens, the Epson EB-600 projector series enables you to kick-start highly engaging interactive presentations right away.

### Image that Illuminates

#### WUXGA – Beyond Full HD Resolution\*

Enjoy a dynamic viewing experience with WUXGA resolution (1920 x 1200 pixels) that is beyond Full HD. Deliver clearer high-resolution images from PCs, tablets and smart phones and watch your photos, 3D CAD, Blu-ray and online videos come to life in Full HD. Data figures on spreadsheets and charts will also be displayed clearly for everyone to read accurately.

#### High Brightness Even in Eco-mode

Reduce energy consumption in ECO mode with minimal impact on image brightness. When ECO mode is turned on, brightness will only be reduced to 2,900 lumens. That means you can still enjoy bright projection even as you save on energy costs.

\* Only applicable for EB-696Ui.

#### Auto-brightness Adjustment

Save energy consumption and do your part for the environment with the eco-friendly auto-brightness adjustment. The luminance sensor detects the brightness level of the environment and adjusts the projector's brightness automatically, giving you power and cost savings. This function can be turned on/ off according to your preference.

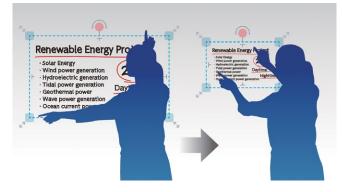

### **Panoramic Interactive Experience**

#### Finger-touch Interactivity\*

Control your presentations and PC applications or navigate the modern touchscreen interface with the finger-touch enabled interactive projectors. You will be able to point, swipe, draw, pinch in/out and rotate using your fingers, even when projecting wirelessly.

When connected via USB cable to a PC running Epson Easy Interactive Tools 4.2 software, the projector supports six fingers and two interactive pens, allowing multiple users to write simultaneously for maximum participation and collaboration. When operating the projector standalone without a PC, the projector allows two fingers and two pens to write at the same time.

#### **Dual Interactive Pens\*\***

The two new interactive pens are designed for high-speed writing, accurate response and long battery life. The high response speed and accuracy make drawing as instant and smooth as writing with a real marker on whiteboard. The pens can also function like a computer mouse to select, drag and double-click objects.

Both interactive pens are able to draw at the same time throughout the whole screen with its own selected colour. Fingers can select a third colour or the eraser function to work on the screen together with the pens. The pens also come with a side button for users to instantly activate various assigned functions to facilitate the most convenient annotation experience.

\* Only applicable for EB-696Ui and EB-695Wi.

\*\* Only applicable for EB-696Ui/695Wi/685Wi.

#### ULTRA-SHORT THROW INTERACTIVE PROJECTORS EB-696Ui/695Wi/685Wi/685W

#### **PC-less Interactive Functionality**

With this original PC-free interactive feature by Epson, you can write and draw on the projector's in-built digital whiteboard or any image projected from other non-PC sources such as document camera, blue-ray player, video conference system, tablets and smart phones. You can also control any photo slide show loaded from a USB memory key in PC-free mode.

#### **Dual Screen Seamless Interactivity**

To deliver the most immersive interactive experience, two projectors can be installed side by side to create an ultra-wide interactive panoramic screen of up to 177 inches diagonal. Write or move objects seamlessly across the dual screen with your fingers or interactive pens. With the extended interactive space, more meeting information can now be displayed for cross-referencing and you will never have to worry about limited drawing space anymore.

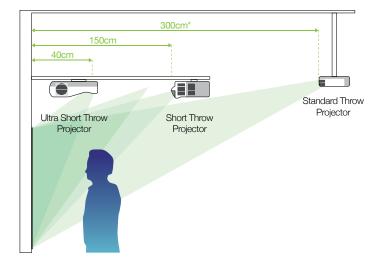

## **Enhanced Audience Collaboration**

#### **Ultra-short Throw Advantage**

With ultra-short throw, light from these interactive projectors is less distracting as it barely touches the presenter, ensuring a more comfortable experience compared to conventional models.

As light is not blocked by the presenter, less shadow is formed on the screen, allowing the audience to clearly see the information projected at all times.

The ultra-short throw setup also ensures stable performance of the two interactive pens and provides consistent colour uniformity over the entire screen. These advantages keep the presenter more comfortable and enable clear, smooth presentations.

Conventional projector with shadow interference

Epson ultra-short throw projector

Conventional projector with blinding glare on Epson ultra-short throw projector presenter's face

\* Projected throw distances are just an estimation and should not be taken as actual measurements. Throw distance may vary for different models within the same range. \* Estimated throw distances are 100 inch diagonal screen size.

#### **Versatile Projection**

With ultra-short throw, it is now possible to project a large screen within the narrow space of retail windows. You can now create captivating window displays with the help of large projections to increase the visibility of store merchandise. The ultra-short throw projectors can also be flexibly mounted onto a table to create an engaging interactive tabletop for meetings and discussions.

Desktop projection for window display

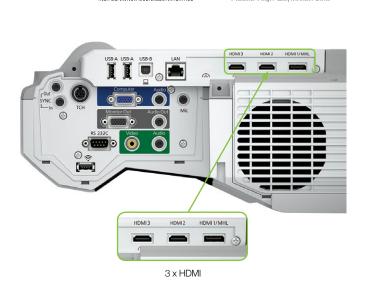

Table top projection

# Wide Range of Connectivity

#### **Full Compatibility**

Advanced connectivity features mean convenient and hassle-free projections of your presentations. Featuring wide-ranging interfaces, these projectors not only correspond with multiple conventional analogue sources, they are also compatible with HDMI and supports CEC. And with three HDMI input terminals, of which one is MHL-enabled for mirroring of Android mobile devices, you can connect to various devices and share contents from different sources easily.

Simply connect your MHL-compatible device with the MHL cable to fully enjoy your contents on the big screen. What's more, when connected, you can charge your Andriod mobile device and operate it using the projector's remote control.

#### **iProjection App for Mobile Devices**

The iProjection app enables both iOS and Android devices to easily connect to the projector. You can use iProjection to wirelessly project various documents, photos and web pages, and draw on the device screen and share on projection. To connect, search for the projector in your local network or simply scan a QR code displayed on the projector screen. Remote control function is also built into iProjection so you can use the app to control projector functions. In addition, iProjection now supports screen mirroring (without audio) from devices running on Android 5.0 and above.

\* In iProjection, projector profile search, multi-screen display, distribution function, audio transfer, movie file transfer, interrupt connection disabling and encryption data transfer capabilities are not supported.

\*\* Wireless LAN USB dongle ELPAP10 is sold separately to enable projector's wireless connectivity to PCs, devices and wireless network.

#### Split Screen

Split the projector screen into two to project images from two different sources simultaneously. With the maximum 100-inch large screen size, you can project images from two different sources side-by-side clearly. For example, you may show your presentation or document camera image on one side and write on the digital whiteboard on the another. With this function, there is no need to purchase two separate displays.

#### Multi PC Projection

Project from your laptop wirelessly using Epson iProjection software. Up to 50 terminals (laptops and mobile devices) can connect to a single projector via this software. A laptop or device of the presenter can be assigned as the moderator and send a projected image with questions to all connected participant devices. After the participants write down their answers on the image and project them, the moderator can view thumbnail previews of the answers and select up to four of them to be projected on the screen simultaneously for sharing and comparison.

## **Convenient and Ergonomic Features**

#### Home Screen

View and access your most frequently used functions immediately from the home screen. See all input sources at one glance and switch between them easily. For devices to easily connect wirelessly, the projector's wireless network information and QR code are also shown on the home screen.

#### Auto Power On

With the auto power on function, projection starts automatically once a projection signal is detected via VGA cable.

#### Improved Control Toolbar on the Projector Screen

Conveniently access commonly used functions from the control toolbar projected on screen. Buttons available include Home, Print, Save, Image Share, Input, Zoom, A/V mute, Freeze, Volume, Split Screen, Timer, Document Camera and Power Off.

#### **Enhanced Whiteboard Feature**

Drawings and images on the projector's digital whiteboard can be saved into a USB memory drive or printed via a network printer.

#### **Eco Features**

- Uses just 0.37W of power in standby mode
- Projector optics employ lead-free lenses
- Unpainted plastic housing reduces the environment impact
- The flame retardants used in the plastic housing do not contain chlorine or bromine

### **On-screen Control of Epson Document Camera**

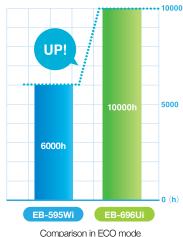

With greater compatibility to Epson document cameras\*, you can adjust document camera functions like zoom, auto focus, image capture, rotation, video recording, etc. from the on-screen document camera control toolbar. These controls are enabled by just a HDMI connection. Now, you can easily control the document camera to achieve your ideal image without moving away from the presentation screen.

\* Only applicable for ELPDC21/ELPDC13/ELPDC07 document cameras.

#### Longer Lamp Life

With a long lamp life of 10,000 hours in ECO mode, the frequency of lamp replacements is reduced, saving you time and lowering the total cost of ownership.

# SEE VIBRANT, REALISTIC COLOURS WITH HIGH COLOUR BRIGHTNESS.

See colours like never before. Epson 3LCD projectors deliver brilliant colours that match its white brightness to give you balanced, realistic, and vibrant images. It's no wonder Epson projectors are the people's preferred choice.

"Based on a third-party study made by Radius Global Market Research of nearly 900 participants in the US

#### Up to 3X Wider Colour Gamut

Colour gamut refers to the range of colours that can be reproduced by a display device – the wider the gamut, the more realistic it is. Epson 3LCD projectors project three times wider gamut that matches closely to the original standard of a display device (sRGB), as compared to 1-chip projectors.

Compared against similarly-priced leading 1-chip DLP<sup>®</sup> business and education projectors based on NPD data from July 2011 through June 2012 (available from www.npd.com). Colour brightness (colour light output) measured in accordance with IDMS 15.4. Actual colour brightness will vary depending on actual usage conditions. 3LCD<sup>®</sup> is a registered trademark of Globa Epson Corporation. DLP<sup>®</sup> is a registered trademark of Texas Instruments, inc. and its use here dees not imply any altation with or endorsement by them.

sRGB standards

EPSON 3LCD COLOUR GAMUT

> Comparing the yellow corners among the three gamuts, 1-chip projectors have a distinctly darker and smaller set of colours which are not as vibrant as Epson 3LCD projectors.

COLOUR GAMUT 194,000 Other 1-Chip Projectors

### Up to 3X Brighter Colours

Epson 3LCD projectors deliver up to three times the colour brightness, effortlessly creating the same colour and white brightness, resulting in faithful images with superior colour balance.

#### **No Rainbow Effect**

With 1-chip projectors, the spinning motion of the sequential colour wheels tend to cause colours to break out into distinct red, green and blue. Called the

rainbow effect, this may cause users to suffer headaches with prolonged viewing. Epson projectors do not give out this effect, giving users a comfortable experience.

www.epson.com.sg/colourbrightness

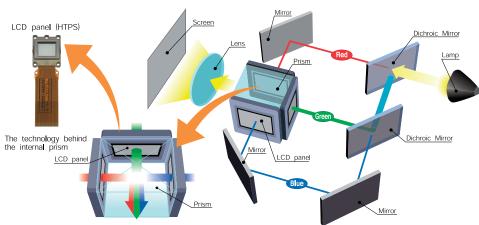

# **EPSON 3LCD TECHNOLOGY – FOR BRIGHT, FAITHFUL COLOURS**

3LCD projectors offer brighter and more accurate colours as they produce different shades and hues by filtering, then mixing beams of the three primary colours (red, green and blue).

In a 3LCD projector, white light is first split into the three beams of primary colours. Each beam is then filtered through its own LCD that will give each individual pixel of the image its exact brightness for each colour. The colour beams are then perfectly recombined in a prism before being projected out as a complete image.

This compares to projectors using single-chip technology that actually project individual colours sequentially by filtering their single white light beam through a colour wheel, and then relying on human colour perception to combine the colours in the viewers' minds.

As a result, 3LCD projectors also offer greater detail, smoother gradations, no "colour breakup" effect, are easier on viewers' eyes, and consume about 25% less power to achieve the same brightness compared to a single-chip projector using a lamp of the same wattage.

3LCD projector : RGB are projected at the same time, which makes the single composite image easy on the eyes.

 An independent test by projector review media ProjectorCentral.com in 2009 of about 800 projectors found that on average, 3LCD projectors use 25% less power than single-chip projectors.

<sup>2</sup> Colour brightness (colour light output) and white brightness (white light output) will vary depending on usage conditions. Colour light output measured in accordance with IDMS 15:4; white light output measured in accordance with ISO 21118.

Maximum speed and range is achievable when used with same enhanced mode technology. Actual data rates, features and performance may vary depending on your computer system, the environment and other factors.

<sup>4</sup> When used in the general office environment (the amount of floating dust: 0.04 - 0.2 mg/m<sup>3</sup>). Based on the Epson's in-house test results

Information correct at time of printing. Printed October 2017

1 Lamp life will vary depending upon mode selected, environmental conditions and usage. Lamp brightness decreases over time.

<sup>2</sup> Colour brightness (colour light output) and white brightness (white light output) will vary depending on usage conditions. Colour light output measured in accordance with IDMS 15:4; white light output measured in accordance with ISO 21118.

Maximum speed and range is achievable when used with same enhanced mode technology. Actual data rates, features and performance may vary depending on your computer system, the environment and other factors.

<sup>14</sup> When used in the general office environment (the amount of floating dust: 0.04 - 0.2 mg/m<sup>3</sup>). Based on the Epson's in-house test results.

Information correct at time of printing. Printed October 2017

# **PROTECT YOUR PROJECTOR. USE GENUINE LAMPS.**

Don't compromise on safety - use Epson genuine lamps to avoid damaging your projector. Eliminate the risk of melting parts of your projector, as well as breaks that result in high-voltage shutdown. With a 0% failure rate even after 2,000 hours of usage - compared to 70% in non-genuine lamps - Epson genuine lamps are safer and more reliable. Choose the best possible viewing experience filled with longlasting sharpness and colour in every projected image with Epson.

#### **GENUINE EPSON LABEL**

To ensure the best quality and safety when using your Epson Projector, look for the "Genuine EPSON Colour Shifting Label" on your projector lamp. Real quality and value, only with Epson genuine supplies.

#### **DANGERS OF NON-GENUINE LAMPS**

UNRELIABLE

Counterfeit lamps deteriorate and break much faster than genuine ones.

#### UNSAFE

Parts of your Epson projector such as the housing or wires may melt, disconnect, or become damaged when using non-genuine lamps.

#### POOR IMAGE QUALITY

Counterfeit lamps may result in inaccurate colour projection, lower brightness levels, as well as flickering images that spoil your viewing experience.
